SHOWER RACK »ANNA«

DURABLE. RELIABLE. RESPONSIBLE.

CONTENTS

1 x stainless steel shower basket, 1 x stainless steel hook with protective cover,
1 x razor holder, 2 x suction cups, 4 x spacer rings

INSTRUCTIONS

Attach hook to the upper end of the shower basket. To do this, first thread the bent end through the hole at the top of the shower basket from below.
Hang the shower basket on the desired place of use (e.g. shower rod).

Clean the places (recommendation: lower third of the product) where the **suction cups** are to be attached/fixed to a smooth surface very carefully with water and detergent leaving absolutely no residue and dry thoroughly with a clean towel. Clean **suction cups** thoroughly with dishwashing detergent, dry carefully and attach to the two main bars of the product (opening slots on the **suction cup** backs). Spread a total of one small drop of detergent on the contact surface of both **suction cups** and press **suction cups** firmly to the wall. Allow shower basket to rest for two hours. If the **suction cups** do not hold due to the wall texture, use spacer rings as an alternative.

www.laakfeld.de/manual

Alternatively, place spacer rings in the lower part of the shower basket on the main bars to prevent direct contact between stainless steel and the wall. Hang razor holders in the shower basket as needed
